**SUPERVISOR'S COMMENTS 03/02/2026**

- Update new project specific objectives which are; Data collection and cleaning, data analysis and visualization, develop prediction model based on prices, model deployment, develop a user interface.
- Measure accuracy of the model before deployment
- From the last column of my csv dataset, the data are not factors but they are conclusions.
- Add TSH/USD currency exchange rate as the factor for petrol price.
- I should use specific fuel example petrol or gas.
- Do more research on Gas data
- Using already input data for the system first, then update it to allow user to input data.
- System should display data summary
- Do more literature review of my project.
